

# Working Prototype Known Problems Report

SocialShopper

KMS Inc.

12/01/2019

---

## Known Bugs:

- Sometimes if there is a bunch of lists, clicking one takes you to the wrong one
- When adding a new friend from the list setup page, the list of available friends in the list setup view is not updated.
- Opening friends list after creating new user does not get the display name or friends list on first login.
- Adding an item from the mock store to the list items may sometimes cause an overflow by having too long of a description of an item.
- The order in which you check mark users for an item matter. It matters because it could have a new item with the values (x,y) and you want to add more quantity to the item and you select the values are (y,x) it won't add to the already existing one, but rather create a new one.
- Notifications do not work.
- Signing into an account, then going into profile page grabs the wrong user's uid. Going back to menu from profile list then loads to wrong user's lists (Only happens on some emulators).
- Font in list view is white so you can't see it in light mode.
- 'Sign in with Google' only works on certain emulators.

## Fixed (since 12/01/2019):

- ~~Deleting a list from the "Lists" view does not delete the list id from the user's page in firebase~~
- ~~Searching for a user by name in 'add a friend' causes null errors- (This was happening because there were users with no field 'displayName' in the data~~
- ~~"Items" array does not initialize correctly when creating a list with other participants-~~
- ~~When adding users to a list it displays the UID and breaks the names up I to different checkboxes-~~
- ~~User can be deleted from the list set up and can't be added back-~~
- ~~Deleting a list sometimes doesn't delete the correct list-~~

~~—The file can still be created with zero participants.~~

**Acceptance Criteria:**

- Can the User create an account in the App?
- Can the User log-in with a Google account?
- Can the User create a list by themselves?
- Can the User add a friend to their account?
- Can the User create a list with their friend?
- Can the User set a budget on the list for the whole group?
- Do the Users lists stay in their account even after they log out?
- Do the Users friends stay in their account even after they log out?
- Does the app display the individual totals for all of the participants?
- Does the app allow the User to open Venmo or CashApp within the app?
- Can the user manually enter an item into their list?
